

TCL Communication Technology Holdings Limited

2025 Conflict Minerals Report

Feb. 6th, 2026

CSR Team

1. Company Profile

Founded in March 1999, TCL Communication Technology Holdings Limited (hereinafter referred to as “TCL Communication”, “the Company” or “we”) headquartered in Shenzhen is a world leading mobile terminal manufacturer and internet service provider, and one of the core industries of TCL Group.

Following our mission of “Building a Sustainable & Connected Future with Advanced Technology”, TCL Communication has been committed to carrying out purchasing and operation responsible for the society, environment and ethics. To illustrate, our factory has been certified with RBA, ISO14001 and ISO45001, and has received strict CSR audits and recognition from our valued customers.

TCL Communication holds a zero-tolerance attitude towards any activities that impedes the legitimate rights and interests of human rights. That is the reason why the Company has been devoted to the due diligence program by OECD and RMI, upon our supply chain to find out whether the metals (tin, tantalum, tungsten, gold, cobalt and mica, known as conflict minerals) contained in our products are sourced from nine covered countries as well as conflict-affected and High-Risk Areas (CAHRA).

2. Reporting Period

The reporting period in this report is from Jan. 1, 2025 to Dec. 31, 2025.

3. Definition/Terms

- Conflict minerals - A) columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives; or (B) any other mineral or its derivatives determined by the Secretary of State to be financing conflict in the Democratic Republic of the Congo or an adjoining country.
- Covered Countries - adjoining countries of the DRC defined by the United States Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010
- CMRT – Conflict Minerals Reporting Template
- EMRT – Extended Minerals Reporting Template
- OECD - Organization for the Economic Cooperation and Development
- RMI - Responsible Minerals Initiative
- RCOI - Responsible Country of Origin Inquiry
- RMAP - Responsible Minerals Assurance Process
- SOR - Smelter or Refiner

4. Implementation of OECD Due Diligence Guidance

Adopting the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-affected and High-risk Areas, TCL Communication has carried out a thorough analysis on its supply chain and confirmed our position in the supply chain. That is, the Company is a terminal product manufacturer that purchases spare parts from suppliers and sells products to customers.

Considering the ores have been converted to coltan, cassiterite, gold, wolframite, or their derivatives through smelting or refining, the mineral source cannot be determined from our position in the supply chain. Based on the Guidance, downstream companies are advised put forth their best efforts to identify and review due diligence procedures for smelters/refineries in their supply chain and to assess their compliance with the due diligence measures. Therefore, we have adopted the RCOI process to trace SOR of minerals to ensure compliance.

5. Conflict minerals Due Diligence Framework

TCL Communication has worked out a due diligence framework to monitor the risks of conflict minerals and accept the smelters or refineries upon RMAP. The Company has researched on all its suppliers and conduct follow-up investigation upon high-risk suppliers.

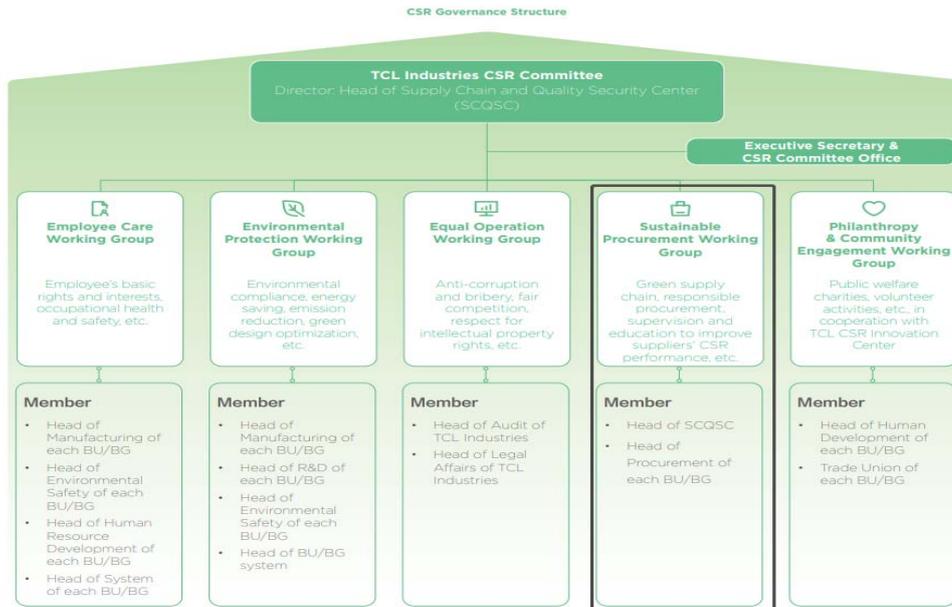

5.1 Establish a conflict mineral company management system

First of all, we have a conflict minerals policy that is formal and open to the public to manifest our commitment to safeguarding human rights and the environment, which can be found in

<https://www.tcl.com/content/dam/brandsite/region/global/legal/Announcement-conflict-mineral.pdf>.

Besides, we also have formulated Conflict Mineral Report Operation Procedure to guide the implementation of the policy, in which the roles and responsibilities of relevant departments are outlined and the sourcing requirements and due diligence procedure on suppliers are also specified.

Then we have set up a CSR Committee with a function of sustainable sourcing for risk control and developed a management system to help identify and control risks. The group is led by the leader of our supply chain center, with sourcing and quality team as executive members. The sustainable sourcing working group is responsible for overall control of the management system and report the risks timely to high-level management for further investigation and control.

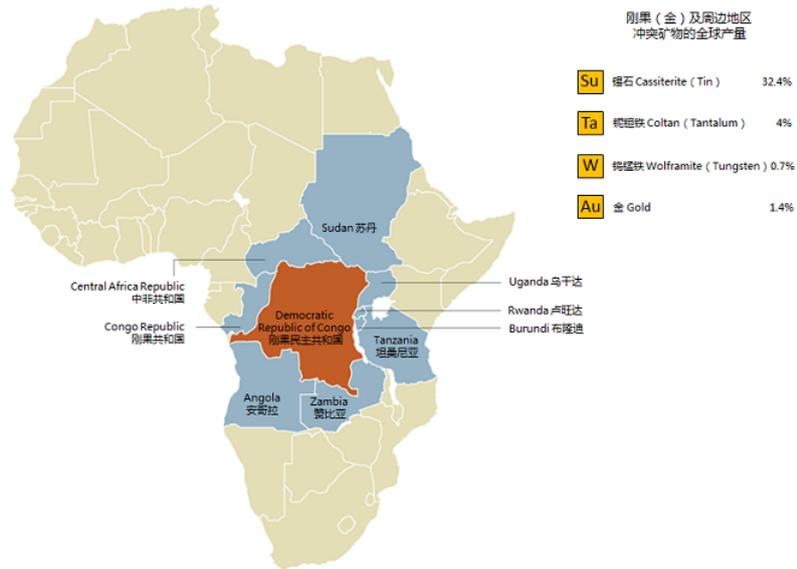

Besides, we also work closely with our suppliers for capacity building and whistleblowing mechanism to ensure our management is transparent. TCL Communication has included the conflict mineral requirements into our supplier contracts and all of the suppliers are required to declare not to source minerals from the covered countries.

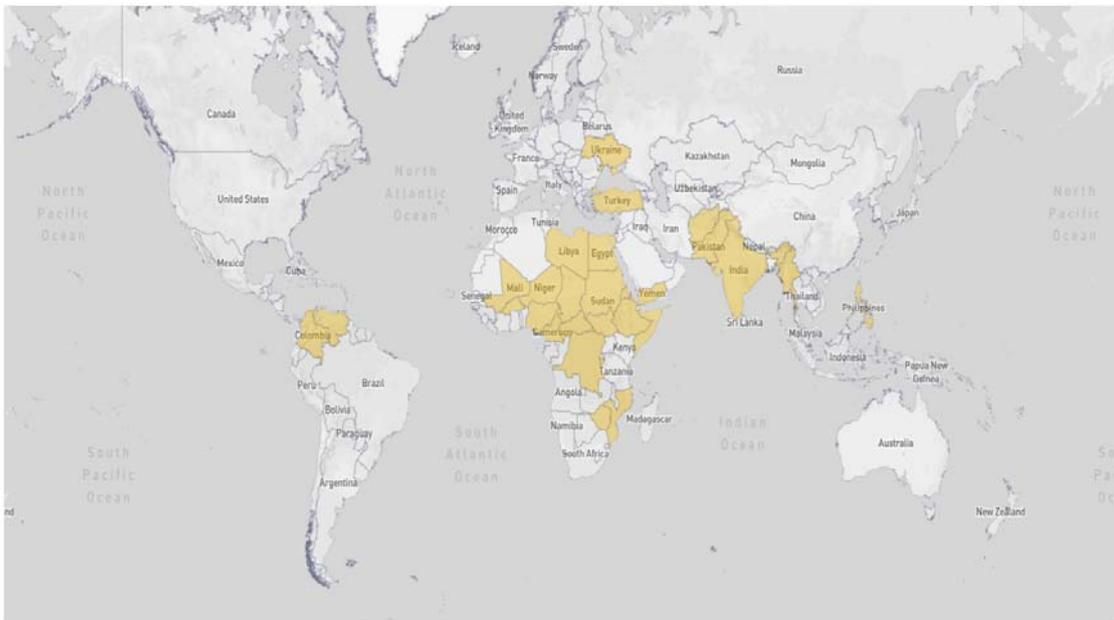

5.2 Identify and assess risk in the supply chain

Our major products are electronic products including mobile phones, tablets, routers and wearables. Most of them needs to source minerals so as to help better address the text information and achieve other functions for our products. Besides, the PCBs of most electronic devices need to use tin mineral.

Based on the product categories and corresponding suppliers, as well as the "Covered Countries" and Conflict-affected and High-risk areas under Regulation (EU) 2017/821, we have a detailed analysis on the risk mapping of our products, and find out that we do not have any suppliers from the covered countries and high-risk areas.

Covered Countries

Conflict-affected and High-risk areas under Regulation (EU) 2017/821

Since we do not source raw materials or minerals from SOR directly, it is difficult to identify the upstream mineral suppliers. The risks identified in our supply chain are listed as follows,

- Is the SOR located in the DRC or neighboring country?
- Has the SOR procured ore from the DRC or the covered countries?
- Is any information provided from the SOR and supply chain level accurate?
- Given the global nature of the supply chain, could most smelters/refineries in their location be at risk?

- Even if smelters/refineries are reported in our supply chain, are we sure that the mineral is used in our products?

5.3 Design and implement a strategy to respond to identified risks

TCL Communication has designed a strategy covering the following measures. First of all, we continuously conduct RCOI based on RBA/RMI to ensure compliance of refineries and smelters and we also require the SOR out of the conformant list to actively participate in RMAP. If the SOR fails to pass the RMAP upon a specified schedule, we will refuse to source from them and require our suppliers to remove them from their supply chain. By means of the CMRT and EMRT officially released by RMI, we conduct annual investigation on conflict minerals.

5.4 Supply chain due diligence measures

We require our direct suppliers to provide a detailed list of the upstream SORs in cooperation through supply chain due diligence program. Then we make comparison between the list and the RMAP certified SOR to evaluate whether the SORs in our supply chain are free from conflicts. In our due diligence work, we keep in touch with those suppliers who are not willing to respond, and also review the integrity and accuracy of supplier responses. In case of any mistakes, inconsistency and incomplete answers, we will give feedback to our suppliers through an online conflict mineral management system and require them to take corrective actions.

5.5 Report on supply chain due diligence

For external reporting, we have also continuously provided our responsible minerals sourcing policy and status in our annual sustainability report, as well as reported our due diligence measures to our customers and external stakeholders.

6. Due diligence key indicators in 2025

Conflict minerals	Number of SORs	Number of Conformant SORs	Number of SORs under RMAP	Number of extended or SORs	Ratio of Conformant SORs
Tantalum	29	29	0	0	100%
Tin	36	36	0	0	100%
Tungsten	26	26	0	0	100%
Gold	85	85	0	0	100%

Cobalt	44	44	0	0	100%
Mica	6	6	0	0	100%

- Supplier CMRT & EMRT response rate: 100%.
- A total of 226 smelters and refineries was identified in the supply chain and the RCOI of them has been identified from the RMAP certification.
- Among the 226 SORs, all of them have passed the RMAP process.

7. Smelters and refiners list

The SORs listed in the below is confirmed to be in our supply chain. While some of them listed may actually not exist in our products, our purpose is to confirm the accurate SOR list in our supply chain and promote our suppliers through RMAP not to use conflict minerals. The contents of this list (including but not limited to all information provided therein) are for reference only as of the date specified therein, and any inaccuracies or omissions in the listing are not the responsibility of TCL Communication, as it is generally recognized that obtaining an accurate listing is a complex and dynamic process. Accordingly, TCL Communication makes no representations or warranties with respect to this inventory list, which is provided “as is” as of the date specified. TCL Communication hereby disclaims all warranties of any nature, express, implied or otherwise, or arising out of trade or custom, including, but not limited to, any warranty of merchantability, non-infringement, quality, title, fitness for a particular purpose, completeness or accuracy.

3TG and Cobalt/Mica SOR list of TCL Communication:

The list of smelters and their status is dynamically updated and the data in this report was last updated in January 2026.

8. Grievance channels

TCL Communication provides our suppliers and external stakeholders with a grievance mechanism allowing them to voice any concerns or breaches upon conflict minerals. The contact is as follows:

E-mail: tct.csr@tcl.com (TCL Responsible Minerals Team)

Tel: 0752-3055888-5014
